

A Partial-Multiverse Model for Debugging Issues in Parallel Dimensions

RubyNation 2014

Brock Wilcox
awwaiid@thelackthereof.org
bwilcox@optoro.com

MAD SCIENCE

fork() the universe during 'next'

Keep track of all created timelines

Upon 'prev', grab the most recent timeline

Restore (time-travel!) the previous timeline

KILL YOURSELF VERY QUICKLY
OR BAD THINGS WILL HAPPEN

Limitations

Can only travel back to checkpoints

"Partial" time-travel

Zombies

Might crash the multiverse through
memory exhaustion, I guess

THE END

A Partial-Multiverse Model for Debugging Issues in Parallel Dimensions
